

Azure SQL Database Migration

Be flexible, scalable, amazing.

Embrace reliability, scalability and high-speed data retrieval and move your database to Azure SQL. Data modernisation has never felt so good.

Main benefits:

- Migrate to Azure SQL and leverage the benefits of greater scalability and the ability to access your database on both physical and virtual machines
- You'll save time and money! You don't have to manage any virtual machines, operating systems, or database software. Upgrades, high availability, and backups are all managed for you
- High availability out of the box and high-speed data retrieval
- Dynamically stretch SQL Server databases to Azure with Stretch SQL if you don't want to migrate to Azure SQL. It's less expensive than scaling with on-premise storage
- Integrate your database with other backend data related services to 'mobilise' your applications and derive greater insight from BI and analytics
- It offers a secure and compliant environment for your data.

Why Cloud Know How?

We understand that data is at the heart of a business – it drives everything that you do. That's why we take great care getting to know our customers' needs when it comes to their databases. We help each and every one of our customers gain greater value from their databases and the data they hold.

Let us help you modernise your database and transform the way you interact with your data.

Start your transformation now.
