

Migrate to IaaS

Spend more time doing what you do best.

Don't have the time or resources to support the underlying infrastructure required for your deployments? Move to Infrastructure-as-a-Service (IaaS) and let us take care of it for you. All that's left for you to do is what you do best with the added bonus of being able to scale as you need!

What Is IaaS?

Simply put, IaaS is Infrastructure-as-a-Service, which means Cloud Service Providers (CSPs) like us provide businesses like you with virtual resources such as virtual machines, networking and storage capacity.

Main benefits:

- Eliminate capital investment in datacentres and reduce operating expenses. Shift your IT budget towards investment in innovation
- You're no longer responsible for fixing servers, maintaining networking and dealing with basic technical problems! That means more time for you to develop your business
- You don't just get more time, you also get greater efficiency, improved services and security, the ability to scale as and when you need to, at less cost.

Why Cloud Know How?

We will help you to plan the perfect migration from your existing datacentre to IaaS. Whether it's a simple lift and shift, or something a little more involved, our experienced engineers and architects will be with you every step of the way. If a complete move to the cloud just isn't right for you, we can also help you design and build a hybrid environment.

As your technical partner, we will help you to drive your business growth into the future so that you can scale faster, innovate more, and be one step ahead of your competitors.

Start your transformation now.
